

Laurence Moon Bardet Biedle Syndrome "The Classic Ciliopathy"

Living with it in real life and trying to beat it

By a parent of two BBS1 teenagers, Nigel Robson, B.Sc.

Real life BBS1 symptoms	Manifests	GcMAF already successfully treating	GcMAF action	GcMAF effect on BBS	Result
Poor immune system	Daughter's Acne & Cysts needing 5 years of antibiotics	Cancers	Rebuilds immune system	Daughter's Acne virtually gone. Cysts small and self heal.	No need for antibiotics
Language issues	Daughter's Dyslexia. Son's Severe Language Impairment	Autism	Rebuilds immune system. Enables new brain connections	Clearer thinking and memory	Son now doing A levels. Daughter at University
Overweight	Son had fatty liver	Hepatitis and cirrhosis	Rebuilds liver	Helped with weight loss as more energy to exercise	Son's waist reducing 2cms per month & liver function tests normalising
Lack of energy	Sleeping 12+ hours a day	Chronic Fatigue Syndrome	Rebuilds immune system	Now 8 hours a night sleep	Both have customer facing jobs at supermarket
Polydactyl (extra toes/fingers)	Scar tissue from removal	Scar tissue healing	Activates macrophages that scavenge scar tissue	Scars noticeably reducing since being on GcMAF	Scar on foot gone
Eyesight degeneration	Night blindness. Failing eyesight. Forecast of legally blind by mid 20s	Not been tried before	Macular regeneration	Son's maculars now normal thickness. Daughter's maculars better than 4 yrs ago	Eyesight improving

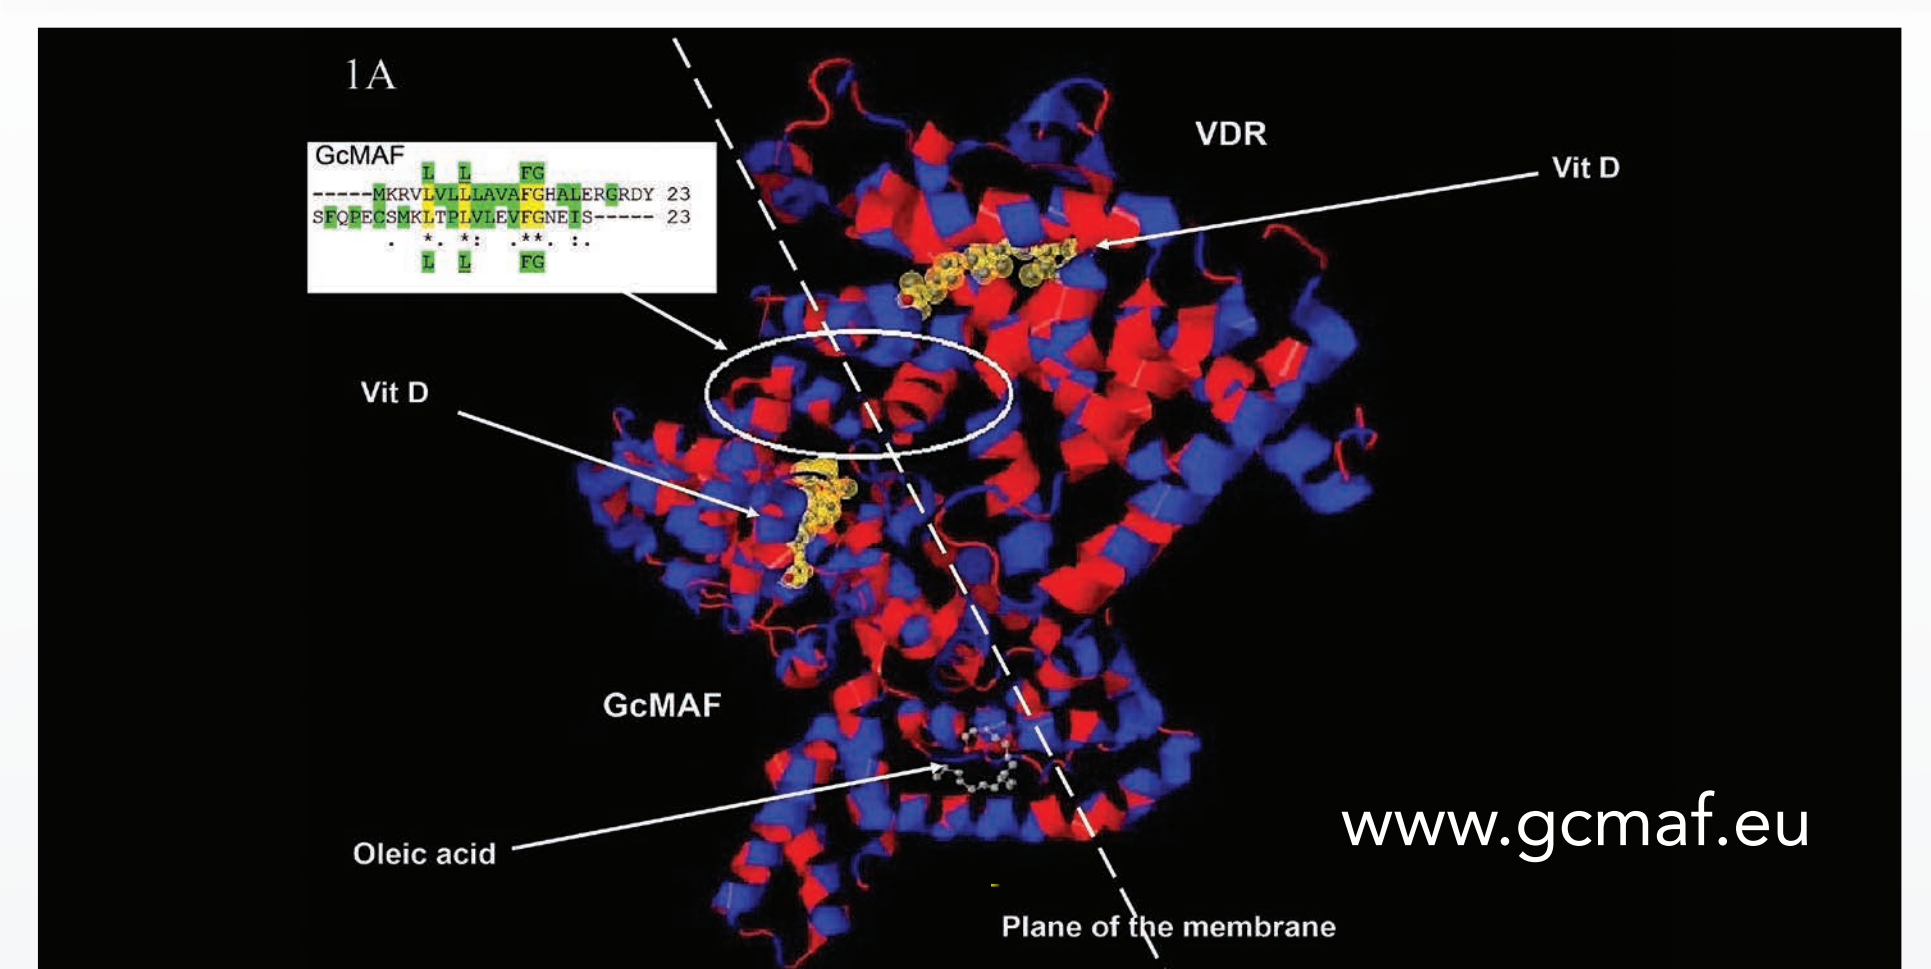

GcMAF - a human protein that removes disease

Natural molecule with 20 known effects in the body

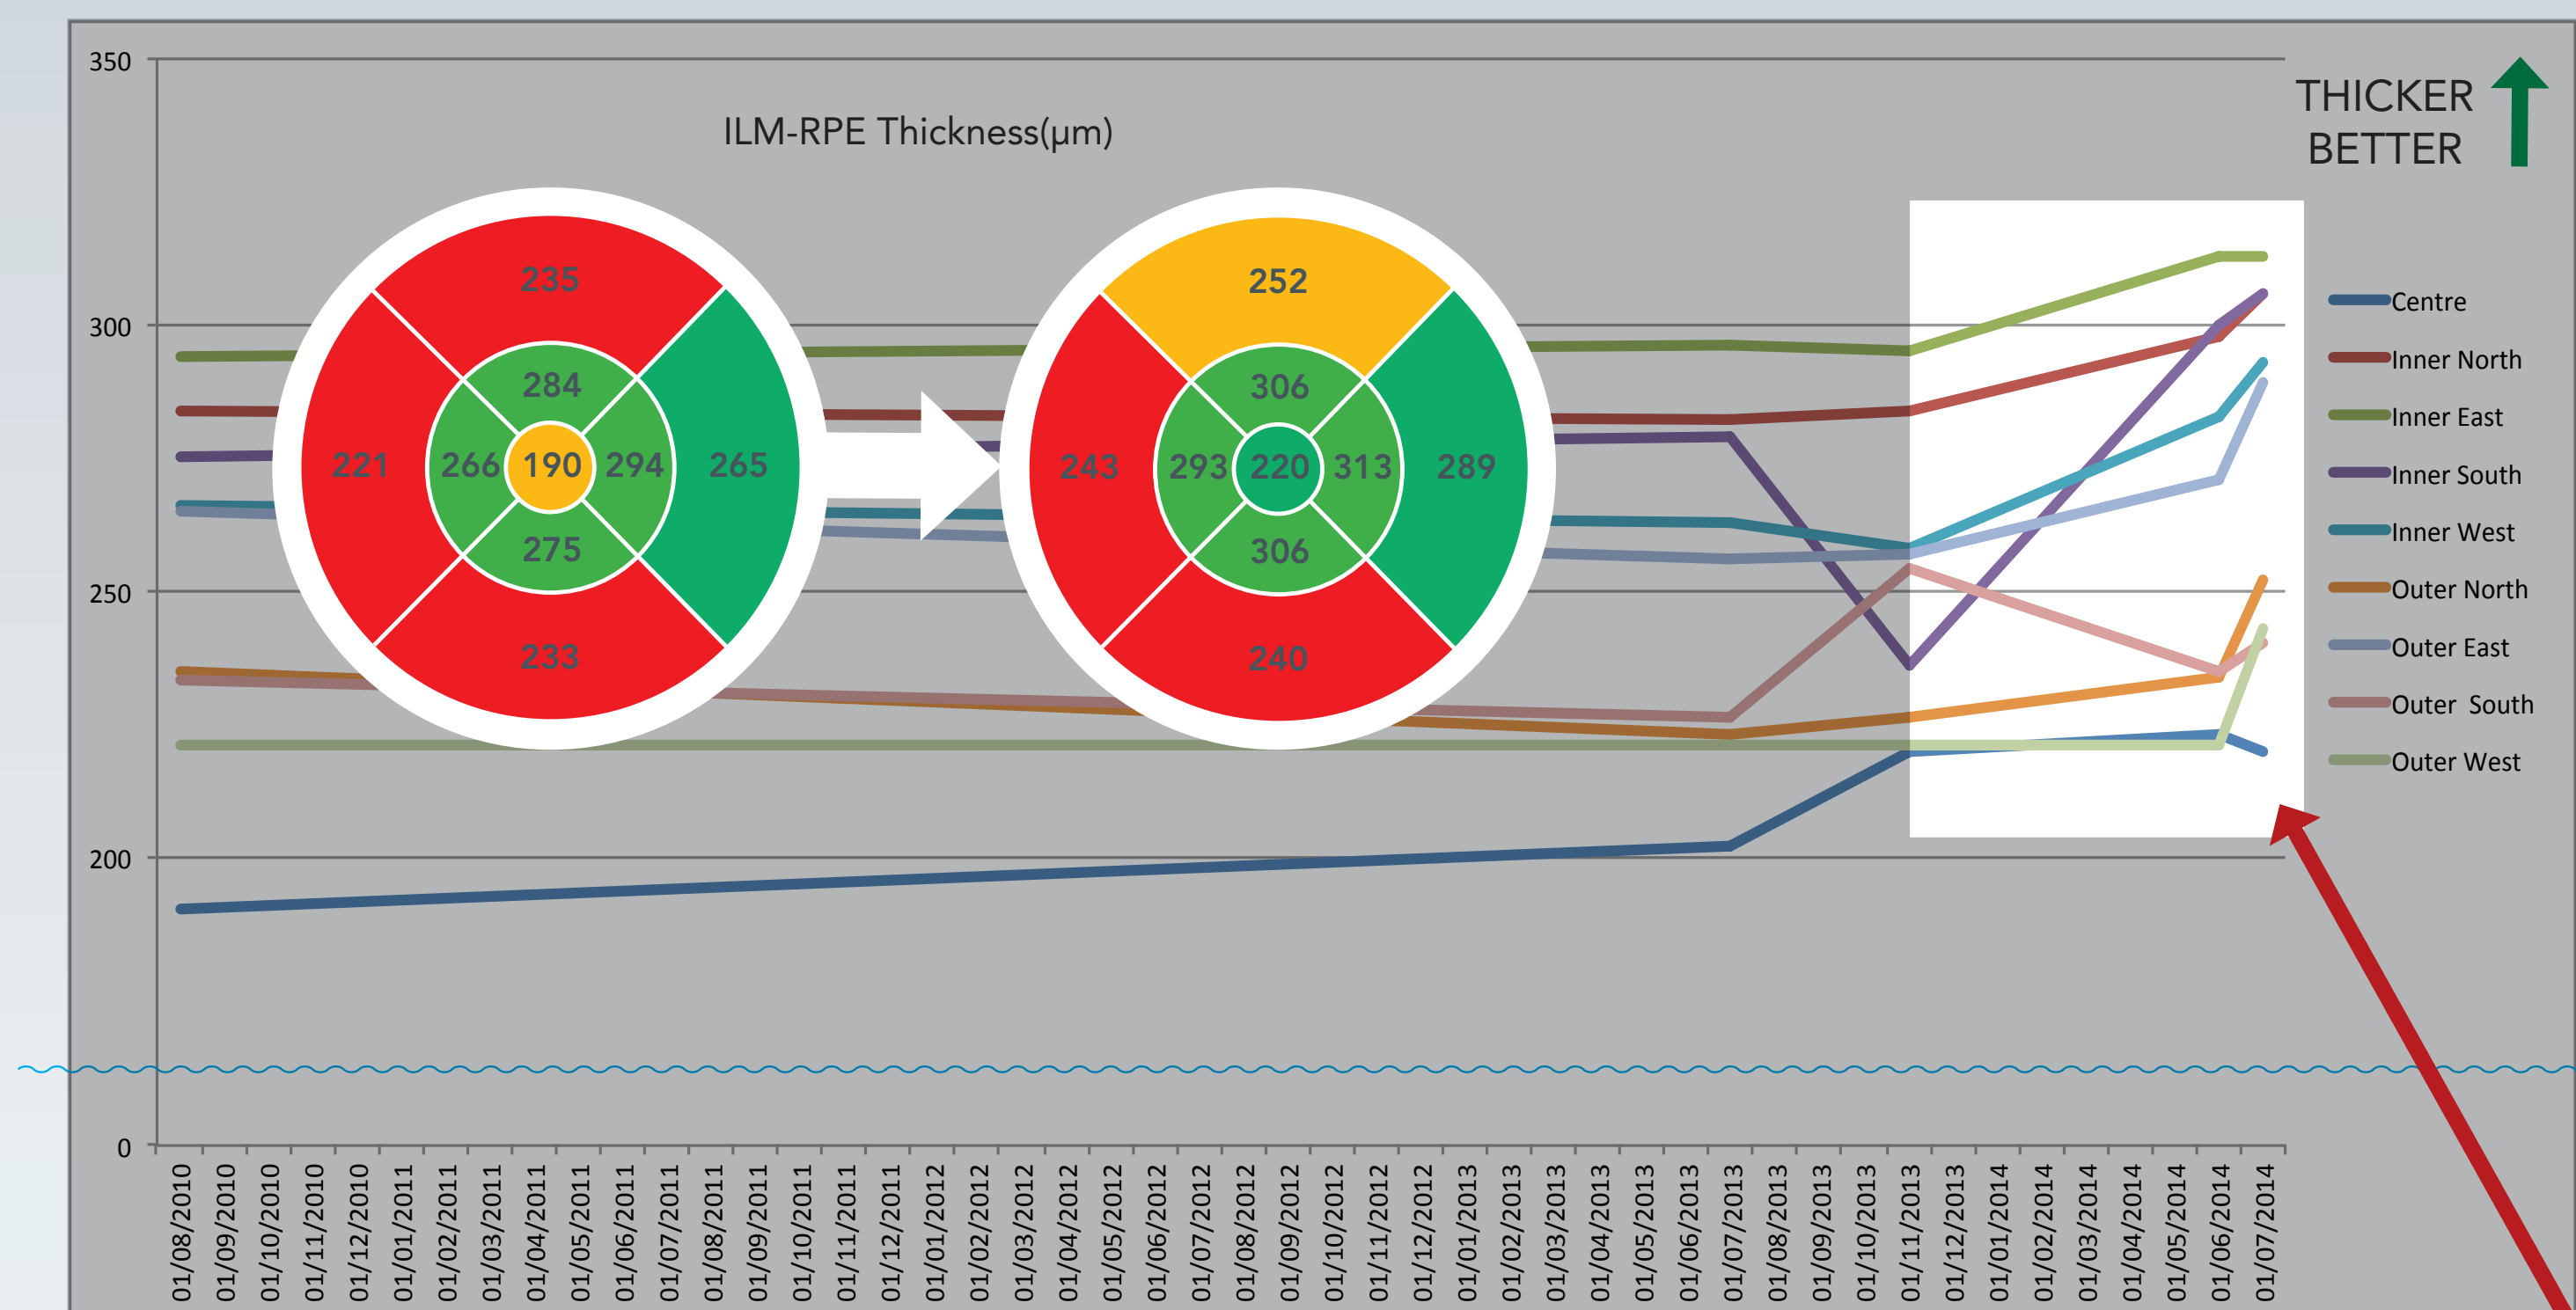

Published papers on the following functions:

- Increases energy production at the mitochondrial level – ME/CFS.
- Improves human neuronal metabolic activity through cAMP signaling – Autism, ME/CFS, MS, ALS.
- Counters toxic effects including cadmium – ME/CFS.
- It abolishes neuropathic pain due to neuro-oxidative stress (stress due to the anti-cancer drug oxaliplatin) in the lab. (neurodegenerative diseases and Autism that have oxidative stress as a pathogenetic mechanism).
- It increases neuronal connectivity by promoting differentiation and the formation of dendrites and neurites (Autism and ME/CFS, where there is a lack of connectivity between neurons).
- Inhibits angiogenesis – stops blood supply to tumours.
- Activates macrophages – phagocytosis and destruction of cancer cells
- Apoptosis – suicide of cancer cells.
- Reverts the cancer cell phenotype to normal (turns cancer cells into healthy cells).
- Reduces the metastatic potential of human cancer cells in culture.

Daughter's maculars regenerating and better than four years ago

Daughter's Visual Acuity improved by a line on higher dosage

Liver function normalising

Method

Initially 0.25ml injected twice a week. Dosage increased gradually over time.

Marked improvement in daughter's eye when at 1ml per day.

Son on 0.5ml per day. 1ml per day from 22 Oct.

Both started using nebuliser on alternate days.

Control

Tested on self first to check for side effects.

NONE

Benefits:

CURED 40 YEAR ACNE PROBLEM

Result: Both now leading normal lives

BEATING BBS
